

# DEFENSIBLE SPACE & LANDSCAPING FOR FIRE SAFETY - FIRESCAPING

Creating defensible space and following fire-smart landscaping (Firescaping) principles will greatly improve your home's chance of surviving a wildfire. The overall approach is aimed at the **reduction and separation of combustibles** in order to protect structures from embers, radiant heat and direct flames. These steps should also include implementing home hardening measures: **Guide #09 – Home Hardening for Wildfire**

Defensible space strategy **creates a buffer** between buildings and surrounding grass, shrub, trees or wildland area. In addition to helping slow or stop the spread of wildfire, it also provides a **safer place for firefighters** to defend the property and allows more time for **evacuation**.

## ZONE 0 NO COMBUSTIBLES

Zone 0 extends from 0' - 5' around your house and is the **most critical area** to ensure that no combustible materials are present. Remove all fire hazards in this space!

- ❖ No combustible materials within 5' of any building or deck
- ❖ Replace jute or natural fiber doormats with heavy rubber or metal grates, remove/replace combustible outdoor furniture
- ❖ Use crushed stone, gravel or dirt instead of bark mulch
- ❖ Replace wood fences in Zone 0 with metal, brick, stone, etc.
- ❖ Remove flammable materials on and underneath decks, patios or porches
- ❖ Remove tree limbs that extend into Zone 0 and that hang over the roof or chimney closer than 10'
- ❖ Remove dry leaves and debris from the roof and rain gutters

## ZONE 1 LEAN, CLEAN, & GREEN

Zone 1 extends approximately 5' - 30' out from buildings, decks and other structures. Maintain this area to be as fire-resistant as possible **throughout the year!**

- ❖ Remove all dead plants, grass and weeds
- ❖ Remove fire-prone vegetation and landscape using firescaping guidelines: **Guide #14 – Fire-Smart Planting**
- ❖ Limb tree branches 6' or more up from ground level and 10' away from other trees and flammables
- ❖ Create a separation between vegetation and items that can catch fire, such as patio furniture, sheds and play areas
- ❖ Cut or mow grasses and weeds down to a maximum height of 4 inches

## BEYOND ZONE 1 REDUCED-FUEL AREA

Many sources recommend creating a defensible zone 30' - 100' away from structures, but in urban and residential areas this may not be possible. **Do all you can** within the boundaries of your property.

- ❖ Space trees apart depending on the ground slope, from 10' minimum on flat ground to 30' minimum on steep slopes
- ❖ Remove fallen leaves, needles, cones and small branches that are deeper than 3 inches on the ground
- ❖ Ensure that vegetation adjacent to roads and driveways is maintained in the same manner as Zone 1, and **keep roads firesafe for evacuation and first responder access**
- ❖ Work with your neighbors to reduce combustibles along your property lines
- ❖ Maintain your property year-round

## DESIGN YOUR LANDSCAPE FOR FIRE SAFETY

**FIRESCAPING** is landscape design that reduces house and property vulnerability to wildfire. A carefully Firescaped design will **reduce the chance of ignition**, lower a fire's intensity and slow the spread of fire – all to help your home survive and to give you more time to safely escape if necessary.

**CREATE** your landscaping plan with plants and elements that provide the best possible fire protection. Use non-flammable hardscaping such as rocks, bricks or pavers. Include open areas to provide a buffer to help prevent flames spreading. Understand that **fire-smart plant selection is influenced by multiple factors (Guide #14 – Fire-Smart Planting)**. Simple landscaping features that protect from flying embers, heat and flames can significantly improve your home's ability to survive a wildfire.

**OTHER FIRESCAPING TECHNIQUES** that help increase fire safety on your property include:

- ❖ Create **fuel breaks** with walkways, driveways, patios, islands, etc.
- ❖ Construct fences with **non-flammable materials** such as brick, rocks, metal or concrete
- ❖ Use a drip irrigation system tailored to individual plant's needs to **keep plants healthy** during the dry season and to save water
- ❖ Use a fire-resistant compost, mulch or thick bark to **maintain moisture** in the soil

**PLANNING & MAINTENANCE** are the two key factors in creating a fire-smart landscape.

## MAINTAIN YOUR PROPERTY THROUGHOUT THE YEAR

**PRUNING** – As vegetation grows, the spacing between plants, bushes and trees is reduced. Regular pruning helps **maintain spacing and removes the dead foliage** that enables even a fire-resistant plant to burn. Larger bushes and shrubs should be pruned up to reduce the chance that they can become ladder-fuels for trees and structures.

**RAKE & CLEAN** – Many bushes and trees drop their leaves regularly, especially in the fall when the fire season is at its peak. Rake and clean the ground as often as needed, and **pay special attention to the area in Zone 0** to keep it free of leaf litter and dry plant debris.

**WHEN USING POWER TOOLS** such as weed-whackers, chain saws and lawn mowers, be very careful not to create sparks or spill fuel, which can start a fire. Make sure that these machines are maintained properly and that exhaust spark-arrestors are installed. Always use caution and **never use power tools during Red Flag Warning** days!

## TACKLE VEGETATION ISSUES AS A COMMUNITY

**REMEMBER**  
your community is only as firesafe as its least properly maintained area.

- ❖ Consider Oakland's **Adopt-a-Spot** program to work on City lots that aren't maintained: [oaklandca.gov/services/apply-for-adopt-a-spot-online](https://oaklandca.gov/services/apply-for-adopt-a-spot-online)
- ❖ If a resident is unable to work on their own property, you can come together as neighbors and create a **Firewise USA® community** to help everyone be more firesafe: **Guide #12 – Firewise USA®**
- ❖ If funds are needed to tackle large vegetation issues or to haul away debris, ask Oakland Firesafe Council about possible matching grants.

Visit OFSC's Firescaping page for more info and in-depth resources
